

# YUNHAI HAN

(858)214-4416 ♦ yhan364@gatech.edu ♦ <https://y8han.github.io>

## EDUCATION BACKGROUND

---

**University of California, San Diego (UCSD)**

09/2019 - present

*M.S. in Dynamics & Controls, Mechanical and Aerospace Engineering*

*GPA: 3.846/4.00*

· **Relevant Course:** Robotics

**Yanshan University**

09/2015 - 07/2019

*B.S. in Mechatronics, Mechanical Engineering*

*GPA: 3.761/4.5, Major GPA: 3.804/4.5*

· **Relevant Course:** Mechatronics

*Ranking: 2<sup>nd</sup> of 594 (First six semesters)*

## FILED OF INTERESTS

---

Robot Manipulation and Control; State Estimation; Robot Perception and navigation.

## RESEARCH PROJECTS

---

### Auto-calibration Method for Urban Autonomous Driving Applications

- Present a system for dynamic camera calibration based on recognition of stop signs
- Track camera intrinsic parameters with clear convergences to stable values
- Published a paper at **ICRA 2021** as first-author
- Describe the system in a journal paper accepted by **Autonomous Intelligent Systems (AIS), Springer**

### Surgical Simulation Framework for Tool-Tissue Interaction

- Propose a framework that continuously tracks the motion of tool and simulates the soft tissue deformation under the tool-tissue interactions
- Compute the implicit Euler energy for the future control and planning task

- Published a paper at **IROS Workshop (Cognitive Robotic Surgery)** as first-author and gave a spotlight presentation

### ***Real-to-Sim* Registration of Deformable Soft Tissue with Position-Based Dynamics**

- Propose an online, continuous, registration method to bridge from 3D visual perception to position-based dynamics modeling of soft tissues
- Account for differences between the simulation and the real, live surgical scenes
- Published a paper at **ICRA 2021** as third-author

### **Differentiable Position-based dynamics framework for manipulating soft tissues**

- Design a backpropagation algorithm for the inverse control task in PBD framework, which is inspired by the methods used in Neural network
- Compute the optimal control actions to manipulate the soft tissues so that it can be deformed into a target shape

### **Numerical Verification Framework for Differential Privacy in Estimation**

- Design a differential privacy test framework for distributional sensing systems using numerical verification method
- Capable of being easily extended to various estimators for verifying the claimed differential privacy
- Wrap up the algorithms, theoretical & simulation results in **Master's Thesis**
- Published a paper at **L-CSS with ACC option** as first-author

### **Learning Generalizable Tactile-based Robot Grasping Strategy for Deformable Objects via Transformer**

- Propose a Transformer-based robot grasping framework for rigid grippers that leverage tactile information from a GelSight sensor for safe object grasping
- Learn physical feature embeddings from visual & tactile feedback and predict a final grasp through a multilayer perceptron (MLP) under the given grasping strength
- Command an optimal grasping strength to the gripper for safe grasping tasks by sampling through the predictions
- Submitted a paper to **RA-L** as first-author

## **SELECTED GROUP PROJECTS**

---

### **RoboMaster Competition**

- Design and build a squad of multi-purpose robots from scratch that are capable of completing different tasks required for the competition
- Responsible for the system design of visual components(including object tracking and monocular vision) and the PID stability adjustment of the gimbal unit on the mobile tank (to prevent bumps and collisions during movement)
- Divide the whole task into several modules for each group member as the leader of vision group

### **National Undergraduate Electronic Design Contest (China)**

- Design and build a single inverted pendulum system using PID controller of the DC motor
- Design and build a wind panel control device that is capable of maintaining the panel at a target degree or rotating it at a constant angular velocity by controlling the motors on both sides (PID feedback)

- Design and build a plate-ball control system that enables the ball to move across the plate through several target points by adjusting the pitch angle of the plate using vision-feedback control (with a camera fixed above the plate)

## AWARDS & HONORS

---

### AWARDS

- 06/2016 China Undergraduate Mathematical Contest in Modelling (CUMCM) *Second Prize*
- 03/2017 Zhou Peiyuan Mechanics Competition *National Excellence Award*
- 05/2017 National Undergraduate Electronic Design Contest *Successful Entry Certificate*
- 09/2017 Asia-Pacific Mathematical contest in modeling (APMCM) *Second Prize*
- 01/2018 Mathematical Contest in Modeling (MCM/ICM) *Honorable Mention*
- 08/2018 RM RoboMasters *Second Prize*

### HONORS

- 11/2017 National Scholarship from Chinese Ministry of Education
- 07/2018 Certificate for Attendance of CDIO 2018 Academy (Japan)
- 06/2019 Certificate of Excellent Graduate in Hebei Province

## PROFESSIONAL SERVICE

---

ICRA 2021	Program Committee member(Reviewer)
AIM 2021	Program Committee member(Reviewer)
ICRA 2022	Program Committee member(Reviewer)

## TEACHING EXPERIENCE

---

MAE145: Robotic Estimation & Planning	Winter. 2021
Teaching Assistant	
MAE146: Introduction to ML Algorithms	Spring. 2021
Teaching Assistant	

## WORKING EXPERIENCE

---

Georgia Institute of Technology	Summer. 2021 - Present
Research Assistant	

## TECHNICAL SKILLS

---

Programming	C/C++, Python, MATLAB/Simulink
Tool	STM32, ROS, Drake, Git, Linux, L <sup>A</sup> T <sub>E</sub> X
Language	Proficient in English and Chinese
